

## **Finish:**

Generally, Resysta has a natural, warm color. By applying the Floor Varnish Glaze FVG-C, you can create different shades. Resysta Floor Varnish Glaze FVG-C is delivered ready-mixed, and does not need to be diluted. The basis of Resysta Floor Varnish Glaze FVG-C is a varnish system diluted with water and dyed with high-quality transparent pigments.

**Recommendation:** In order to ensure a smooth surface, we recommend to apply the finish before installation at low humidity and to avoid higher outdoor temperatures.

## **Sealer:**

Resysta 2K Sealer RFS is a diluted, transparent 2 component polyurethane sealer for in and outdoor use.

After drying, Resysta 2K Sealer RFS covers the surface with a highly resilient, transparent varnish which enormously increases the mechanical and chemical resistance of the treated area.

The sealer protects from stains caused by e.g. grease, oils or other extraneous influences. Even adhesive stains like graffiti or similar can be removed.
